California's Forests and Rangelands:
The 2010 Assessment

STATE OF CALIFORNIA

PRIORITY LANDSCAPE

for Restoring Forest Pest Impacted Areas to Maintain Ecosystem Health

High
Medium
Low

Bioregions
Counties

This priority landscape focuses on restoring insect and disease-impacted areas to maintain ecosystem health. It identifies areas already impacted by insect and disease outbreaks and that are critical for the overall health of the ecosystem. When combined with vegetation maps, tree seed zones define unique ecosystem assets and represent areas potentially having unique genetic resources that should be protected. This analysis uses current stand-level mortality to measure the degree of impact from past or current insect and disease outbreaks to prioritize ecosystems for restoration that have been heavily impacted.

Priority landscapes: For the 2010 Assessment, suggested priority landscapes were created using the best available data sources, subject to constraints on available time and resources. This included nationwide, statewide, and local data sources. Detailed methodology for creating each Assessment chapter's priority landscapes is available at http://frap.cdf.ca.gov/assessment2010.html. Priority landscapes are intended to provide a reasonable depiction when viewed over broad areas, based on varying asset values and threat levels, and are not appropriate at the project or parcel level.

The State of California and the Department of Forestry and Fire Protection make no representations or warranties regarding the accuracy of data or maps. Neither the State nor the Department shall be liable under any circumstances for any direct, special, incidental, or consequential damages with respect to any claim by any user or third party on account of, or arising from, the use of data or maps.

Obtain FRAP maps, data, metadata and publications on the Internet at http://frap.cdf.ca.gov
