2010-2012

FRAP compiled this statewide spatial database of fire perimeters from BLM, NPS, and USFS fires 10 acres and greater in size and CAL FIRE fires 300 acres and greater in size. Collection criteria for CAL FIRE fires changed in 2002 to include timber fires greater than 10 acres, brush fires greater than 50 acres, grass fires greater than 300 acres, fires destroying three or more structures, and fires causing $300,000 or more damage. In 2008 collection criteria for CAL FIRE fires eliminated the monetary criterion and redefined the definiton of structures. Data attributes include year, state, unit_id, fire_num, fire_name, agency, alarm_date, cont_date, c_method, cause, and report_ac. This database developed by BLM, CDF, NPS, and USFS represents the most complete digital record of fire history in California, although it is still incomplete in many respects. Users of the fire perimeter database must exercise caution to avoid inaccurate or erroneous conclusions. For more information on potential errors and their sources please visit our website at http://frap.cdf.ca.gov/projects/fire_data/fire_perimeters/.
